

ASSIGNMENT SUBMISSION INSTRUCTION

You are required to submit your code for assignment questions to the Automated Programming Assessment System (APAS) for marking and grading. Please follow strictly the following guidelines on submission and grading.

- Please do not change the **main()** function given in the program template when developing your own code. The APAS system uses the input and output statements in the **main()** in order to test the correctness of your program code.
- **Submission of Code** – Please submit your code through APAS.
- **Submission Deadline** - For example, if your lab session is held on **Week 3** (any day of that week), then the deadline for your submission will be on **Sunday of Week 4 at 11.59pm**.
- **Late Submission** – Late submission **will not** be accepted for grading. If you have any problems on submitting the code using the APAS system, please submit the code to our lab staff Ms Eng Hui Fang (ashfeng@ntu.edu.sg) or the lecturer via email before the deadline. Again, late submission after the deadline will not be accepted for grading. As such, the score for that assignment will be 0. Please remember to save and submit the code you have developed for each question in your assignment.
- **Automated Grading** – Your submitted assignment code will be graded automatically by the APAS system. Please note that the grading is carried out based on test cases using program input/output with “**exact string matching**”. Therefore, it is extremely important to pay special attention to the program input and output (including letter cases) when you write your programs (a simple mistake on letter case will cause your program to be marked as incorrect.). It is **your responsibility** to follow the question problem specification including the requirements for program input and output when writing your programs. As mentioned, the APAS system will only mark the correctness of the programs based on test cases, and program input/output errors will cause your programs to fail in the test cases. We will not accept any review for such errors.
- **Request for Review** – For each assignment, after your code has been marked and graded, you may submit a request to Ms Eng (ashfeng@ntu.edu.sg) for reviewing your code if you found that the grading is not correct. We will then review your submitted code accordingly. Please note that the period for your request is within one week after your assignment submission deadline (i.e. the deadline will be the following Friday after your assignment submission deadline). Your submitted assignment code will generally be graded after submission and returned to you. Please also note that **late request** beyond the request period will not be accepted. You may retrieve the form from the course website.
- Please do email the lecturer if you have any queries regarding the questions.
